## How it works

## Burr-Off ${ }^{\circ}$

The BURR-OFF ${ }^{\circledR}$ operates on the same basic principle as the BURRAWAY ${ }^{\circledR}$, but is designed for high-production, automated deburring operations. The open-slot design of the "clothespin tool" allows chips to clear easily, which makes the tool ideal for automatic equipment and multi-spindle machines.
Just like the BURRAWAY, the BURR-OFF deburrs the front, back, or both sides of holes in one fast pass.

## Design features

The BURR-OFF ${ }^{\text {® }}$ is a simple one-piece construction. The integral cutting edges can be altered upon request for front or back-cutting only.

All BURR-OFFS except CP-4 through CP-9 come equipped with a sliding tension-adjustment feature to control the amount of edge break.

## Standard and special tool designs to suit your requirements

In addition to our standard
BURR-OFF tools, custom tools are available upon request. Larger sizes, altered standards, and special designs can be supplied to suit your requirements.

Furnish a part print for a quotation, or inquire about our free trial and evaluation service.

cutting edge. Larger tools
feature two cutting edges.

Tools for larger hole sizes up to 1.000 inch $(25.4 \mathrm{~mm})$ are available; request quotation.

## Tool adjustment \& operating recommendations

## Fast and easy adjustment

The amount of edge break will vary with the hardness of the material. Loosen the screw on the sliding tension-adjustment mechanism and move it up or down the length of the slot for more or less stock removal.

## Speeds and feeds

As with BURRAWAY tools, use the same speed and feed rate as you would run a standard HSS drill.

## Tool maintenance and edge resharpening

The BURR-OFF should be inspected periodically for grit and foreign particles, and cleaned as necessary.

The cutting edges may be reground up to four times in order to extend tool life. Refer to Figure 2 below for the proper regrind procedure.
